I ship fast without gambling with quality. For AI products, that means solid foundations: clean APIs, testable pipelines, observable systems, and cost-aware deployments. I focus on turning LLM/ML capabilities into reliable product features, aligning with stakeholders, and building platforms that let teams ship repeatedly.

WORK EXPERIENCE

AI Software Engineer, COSMO CONSULT

Tech: Next.js, vercel, FastAPI, PostgreSQL, PGVector, Django, Neo4j, Azure, RabbitMQ, pulumi, posthog, workos

Berlin, Germany

Apr 2025 - Present

- Developed, **shipped and currently maintain 8 products end-to-end in 8 months** (ideation → deployment) with avg time-to-deployment < 3 weeks, including various customer and internal pilots.
- Standardized analytics and authentication across all apps with PostHog & WorkOS with event taxonomy, funnels, retention and cohort dashboards; weekly exec snapshots adopted by product and leadership for roadmap decisions.
- Architected, designed, developed and took full ownership of **sonar** (the company's most important internal AI platform): designed the end-to-end workflow for live transcript ingestion and custom analysis, and **translate** (COSMO highest adopted internal platform of 2025) with 25% usage without any communications.

AI Engineer, Co-Founder, GEM AI

Tech: Python, Django, FastAPI, ReactJS, TypeScript, Azure, Docker, Kubernetes, PostgreSQL, GitHub Actions.

Paris, France

Jan 2024 – Jan 2025

- Developed "echo", an **enterprise grade scalable retrieval-augmented generation (RAG) tool** using Python, Django, and ReactJS (shadcn) in 45 days, **generating €125,000** in licensing revenue in the first month.
- Scaled to a team of 5 developers to build a **fully functional "snap-and-solve" in 25 days** using Next.js, FastAPI, integrating AI models from OpenAI, Mistral, and Anthropic, and ollama for open-source inference. Implemented monitoring using Prometheus-Grafana and deployed on Azure Kubernetes Services for scalability.
- Developed an adaptive syllabus mapping engine** that creates personalized learning paths using a sequential knowledge graph. Used Keras for OCR, Neo4j for graph databases, and PGVector for vector storage to optimize user proficiency assessments.
- Implemented **CI/CD pipelines using GitHub Actions** for automated testing, integration, and deployment on Azure, reducing deployment times by 40%.
- Scaled to >€175,000 in revenue and a team of 10 developers in 6 months.**

UX Researcher | PERNOD RICARD

Tech: Python, Google Apps Script, PowerBI, Excel.

Paris, France

Jul 2023 – Dec 2023

- Automated **data reporting and engagement analysis using Python** and Google Apps Script, **reducing manual effort by 40%**.
- Conducted **qualitative research to generate user insights** for product development, presented using PowerBI.
- Communicated insights effectively through PowerPoint presentations to stakeholders, contributing to strategic decisions, successfully converting the internship into my own venture.

PASSIONOID TECHNOLOGIES & BLIIP STUDIOS

Co-Founder | Software Engineer

Tech Used: ReactJS, Flutter, Django, React Native, PostgreSQL, GitHub Actions

Pune, India

May 2019 – Sept 2022

- Led a team of 5 developers to successfully **deliver 16+ projects for national and international clients** in 3 years.
- Developed a CRM Automation Engine** for a client in 3 months using ReactJS and Python Django, streamlining client management through CI/CD pipelines.
- Developed a facility management platform** for a client in 3 months, leveraging React and Django REST Framework, GitHub Actions.

PROJECTS

[noll.to](#)

Dec 2025 – Present

Privacy-first document translation built for sensitive workflows, focused on layout retention, controlled data handling, and reliable document processing as a SaaS product.

[testkizuna.com](#) [in dev]

April 2025 – Present

AI-assisted QA and testing product focused on turning quality checks into repeatable, automatable workflows, with a product mindset around reliability and engineering efficiency.

EDUCATION

ESCP Europe Business School

Masters in Management (spec. *Innovation & High Tech*)

Berlin, Germany

Sep 2022 – Feb 2025

- Scored 730 (96th percentile) on GMAT (V41Q49).**
- Relevant Coursework: *Advanced Python Programming, Machine Learning and Analysis, Data Driven Marketing*

SKILLS

- AI/LLM: RAG, semantic search, prompt engineering, eval patterns, Hugging Face/Transformers, Ollama/vLLM
- ML/Data: pandas, NumPy, scikit-learn, PyTorch or TensorFlow (pick the one you're strongest in)
- Backend: Python, FastAPI, Django, REST, async, testing
- Data/Infra: Postgres, Redis, Neo4j, PGVector, RabbitMQ, Docker, Kubernetes, CI/CD, monitoring
